

# DYMO® METAL TAPEWRITER®

*Permanent Embossed Metal Tags  
(shown actual size)*

*Built-in twin punching mechanism  
makes holes or slots*

## **Permanent Embossed Metal Tags on the spot!**

The Dymo M1011 Metal Tapewriter® is the only hand-held embosser that produces raised letter metal tags whenever and wherever they're needed. The durable embossed tags are corrosion-resistant and withstand the extremes of weather. Use the M1011 to identify parts that will be cleaned in harsh chemicals, painted or even plated - tags will never lose their legibility!

The M1011 Metal Tapewriter embosses a .188" (4.8mm) character on 1/2" (12.7mm) tapes. It features a newly redesigned twin punching mechanism. Punch either a hole or a slot for cable ties and put your tag right to work. For best results always use genuine Dymo metal tape. Stocked in aluminum (with and without adhesive backing) and stainless steel (without adhesive backing) for the harshest of environments.
