

RIBTYPE® RIBBED RUBBER TYPE

BECAUSE THE LEGEND MUST CHANGE

Whether you're coding cartons with ice cream flavors or stamping production information on precision aircraft parts, there's RIBtype® interchangeable ribbed rubber type. This versatile product with its unique "ribbed back" solves dozens of marking problems. Ribtype, in one of its many forms, can be snapped into a stamp holder, roller coder or marking machine in seconds, making changes of part numbers, dates or other information quick and easy.

RIBtype is available in many sizes and type styles. From stock boxed sets to multiline logotypes you'll find a form of RIBtype to meet your needs. RIBtype is compatible with Base-Lock rubber type as well as most other brands. It is precision made to exact tolerances in thickness and always aligns perfectly.

Next time your legend must change, choose RIBtype.

RIBTYPE® BOXED TYPE SETS

LETTER & FIGURE SETS

Ribtype letter or "T" sets include an assortment of individual alphabet characters (A thru Z) plus several of each figure (0 thru 9). There are extra letters like A's and E's and fewer of X's and Z's in each set. Ribtype letter sets are the most economical choice for general marking when a wide variety of information changes frequently.

Simply snap the individual characters into a holder (see below) and you're ready to mark. We stock Ribtype letter sets in 17 sizes from 1/16" (1.6mm) to nearly 1" (24mm) high.

FIGURE SETS

If your marking requirement calls for figures only why pay for letters you don't need and throw away? Ribtype Figure or "F" Sets are very popular. Each set includes 4 of each number 0 thru 9, plus dashes, slashes and currency symbols. We stock figure sets in 17 different sizes and styles from 1/16" (1.6mm) through 15/16" (24mm)

RIBTYPE® HOLDERS

With any Ribtype product you'll need a matching holder. Ribbed base sheet or "cushion" is attached to and available on a wide number of products.

RIBTYPE HAND HOLDERS

Ribtype Holders for hand stamping are stocked in many sizes to match the many sizes of Ribtype. Custom size holders can be made in any size you specify. Rocker type holders are recommended for large print areas. The curved surface

makes stamping of large impressions easier than flat stamps.

Self-Inkers speed the stamping process. Ribtype base cushion can be applied to many office-type self-inkers.

ROLLER CODERS & HAND PRINTERS

Carton coding with a Ribtype Coder or hand printer is one of our most popular applications. We stock the Universal Hand Printer (shown) as well as Lincoln's Hand Held Carton Marker.

Lincoln's Ribtype Roller Coders are available in 6 sizes. Please give us a call for more information.

POPULAR RIBTYPE® OPTIONS

RIBTYPE SORTS

Individual Ribtype characters, known as “sorts” are the same as those found in our boxed sets. If you only use A’s, B’s and C’s, for example, ordering sorts is your most economical option. Just specify the style and the characters you need - we’ll do the rest.

RIBTYPE LOGOS

A logotype or “logo” is two or more characters molded into a single piece. Logos save time and give superior impressions over single sorts, especially in carton coding applications. Logos are your most economical Ribtype solution when legends like flavors, sizes or date codes change frequently. Available in any style or size.

RIB DIRECTION

Ribtype is normally furnished with the ribs running in a horizontal (left-right) orientation to the characters. Vertical ribs or “reverse tie knots” which run top to bottom on the characters can be furnished. Vertical ribbed type is used in certain packaging or filling applications, especially in production of snack foods.

MULTI-LINE MATS

Similar to regular logos, Ribtype Multiline “Mats” are just what the name says - multiple lines of copy molded in one piece. A trademark logo or unique typestyle design is considered a Ribtype Mat as well. Mats can include cut-outs or windows so changes can be made easily. A mat is a good solution for hand stamping where only a character or two changes in a multiple line stamp.

MIRROR IMAGE

Reverse-reading “mirror image” Ribtype characters are used in offset printing machines such as the Jan Tech to print on round objects where direct transfer of the image is not possible due to the object’s shape. Mirror image sorts and logos are custom made.

RUBBER CHOICES

Most Ribtype products are produced using natural rubber in a distinctive red color. Natural rubber is best for general purpose stamping using most common stamp pad inks.

Ribtype can be made with Buna (black) rubber that holds up better when used with oil-based ink which causes natural rubber to swell. Silicon rubber is best for hot-stamping and other printing applications involving high temperatures.
