

THE RIGHT PRINTER

SOFTWARE TO DESIGN & PRINT

MEDIA - LABELS, TAGS & RIBBONS

At Menke, we make a total solution to your labeling needs our mission.

First, we do a thorough analysis of your labeling requirements. What data needs to be on the label - bar codes, dates, lot numbers, ingredients? How many labels will be printed per day? What kind of label do you need - simple paper or a high-performance polyester, polyimide or vinyl? Where will the printing be done - office, production, warehouse or shipping department? Who will be doing the printing? Do you need a stand alone printer easily operated by your production employees or are your needs more sophisticated? You may need a printer with host computer and label software printing information from a database. We take all these factors into consideration.

Then we recommend the best solution to meet your needs and budget - printer, software and media (label & ribbon). Because we represent the leading manufacturers, we can select the right combination of brands for you.

Finally, we assist with installation and train your employees. We'll even design your label.

That's what we mean by a total solution.

Select from the Best Brands in Thermal Printing
